

Lighter caps

The welding of a fresh foil seal between the container and our Bapco neck finish guarantees tamper evidence, prevents counterfeiting and more importantly takes up the structural requirements within hot fill or retort environments, thus allowing the over-cap to be:-

- Lower in profile
- No further requirement for a tamper band
- Less structural requirements for the cap itself

Example : Twister screw cap

Typical 38mm Over cap	3.3g
Bapco 38mm Over cap	2g

NET reduction	1.3g
